

WHAT IS CLAIMED IS:

1. A cable assembly comprising:
first and second housings; and
at least one cable connecting the first and second
housings; wherein
at least one of the first and second housings has at least
one finger grip provided thereon, the at least one finger grip
extending from a surface of the at least one of the first and
second housings to allow for finger gripping of the at least one
of the first and second housings.
2. A cable assembly according to claim 1, wherein the at
least one cable includes a plurality of cables.
3. A cable assembly according to claim 1, wherein the at
least one cable is a coaxial cable.
4. A cable assembly according to claim 2, wherein the
plurality of cables are coaxial cables.
5. A cable assembly according to claim 1, wherein the at
least one finger grip includes two finger grips provided on the
at least one of the first and second housings.

6. A cable assembly according to claim 5, wherein the two finger grips are disposed on opposing sides of the at least one of the first and second housings.

7. A cable assembly according to claim 1, wherein the at least one finger grip is a protrusion extending from the surface of the at least one of the first and second housings and arranged to be spaced from an upper surface and a lower surface of the at least one of the first and second housings.

8. A cable assembly according to claim 1, further comprising:

a board; and

at least one electrical connector disposed on the board;

wherein

the board connects the at least one cable and the at least one electrical connector; and

the board and the at least one electrical connector are disposed inside of one of the first and the second housings.

9.. A cable assembly according to claim 8, wherein the board includes a printed circuit board.

10. A cable assembly according to claim 1, wherein at least one of the housing includes:

a first housing portion; and

a second housing portion; wherein
the first and the second housing portions are removably
connected.

11. A cable assembly according to claim 10, wherein the
first and second housing portions are removably connected by at
least one fastening member.

12. A cable assembly according to claim 10, wherein the
first housing portion includes a latch.

13. A cable assembly according to claim 12, wherein the
second housing portion includes an engaging recess which is
arranged such the latch is a zero insertion force latch mated
with the engaging recess.

14. A cable assembly according to claim 12, wherein the
latch includes at least one beveled surface.

15. A cable assembly according to claim 8, wherein the at
least one electrical connector is a board-to-board connector.

16. A cable assembly according to claim 8, wherein the at
least one cable includes a first set of coaxial cables and a
second set of coaxial cables.

17. A cable assembly according to claim 16, wherein the first set of coaxial cables is attached to one side of the board by a connection pad; and

the second set of coaxial cables is attached to another side of the board by another connection pad.

18. A cable assembly according to claim 8, further comprising:

a first housing portion; and

a second housing portion; wherein

the board is held in place by at least one cylinder portion and by at least one post located which are located on at least one of the first and second housing portions.

19. A cable assembly according to claim 1, wherein the at least one finger grip is integral with the at least one of the first and second housings.

20. A cable assembly according to claim 1, wherein the at least one finger grip includes a top surface and a bottom surface adapted to be contacted and held by fingers of an operator.
